

B1-K2-W2 samenvatting van Ervin

1 Visio gereedmaken video

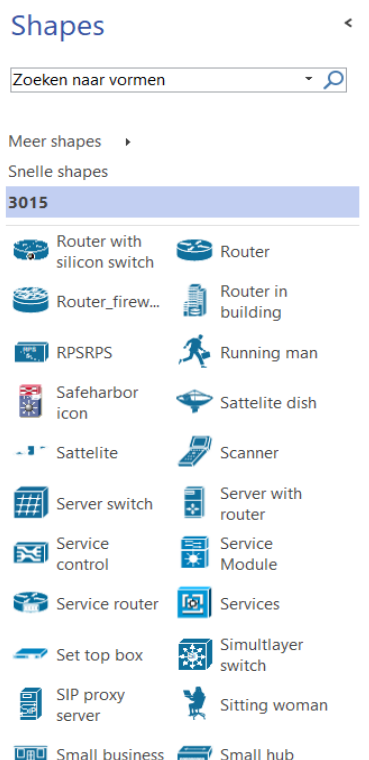

Op het examen ga je werken met Visio. In Visio ga je een netwerk tekening maken. Ik heb hieronder een voorbeeld van een netwerk tekening in Visio.

Shapes toevoegen en je netwerk bouwen in Visio

Hieronder zie je een screenshot over de shapes.

Deze shapes kan je mooi gebruiken voor je netwerk tekening. Ik denk zelf dat we de 3015 shapes niet hoeven te downloaden. Het zit dan namelijk al in Visio.

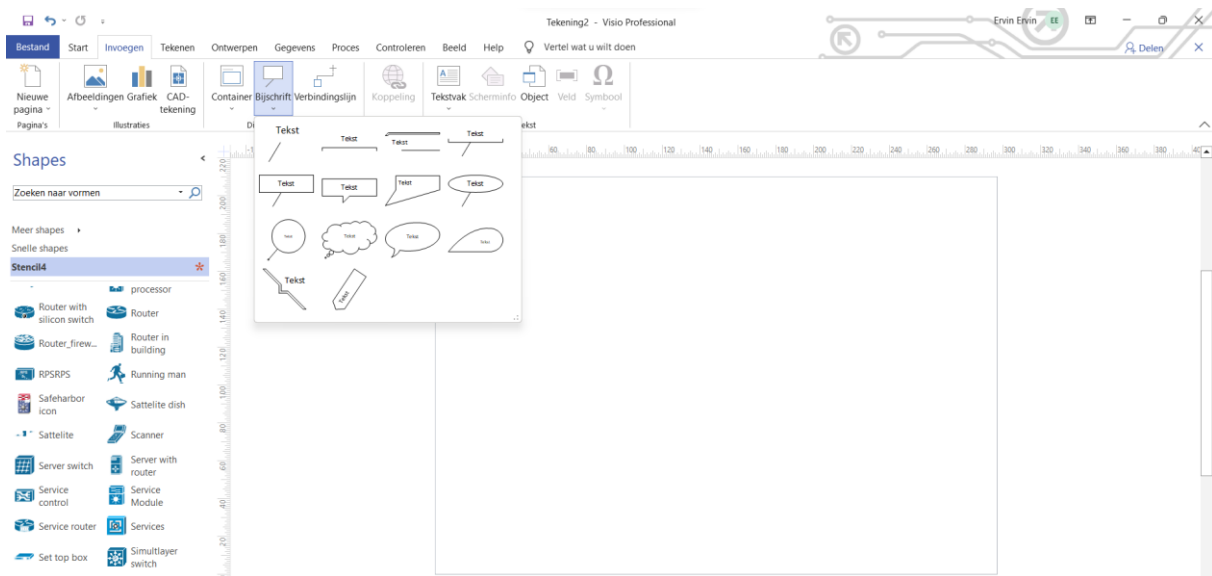

Shapes kan je slepen met je muis om in de lege tekening te zetten

Tekst toevoegen

Als je een tekst wilt invoegen ga je eerst naar **invoegen** en dan klik je op **Bijschrift**. Vervolgens zie je allemaal bijschriften staan. Selecteer een van deze bijschriften om een tekst toe te voegen aan de netwerk tekening.

The screenshot shows the Cisco Packet Tracer interface. On the left, there is a table for recording device information:

Device Name	IP Address	Subnet Mask	Physical Interface	Physical Interface Description

Below the table, the 'Objectives' section states: "Map a network using LLDP and SSH remote access."

The 'Background / Scenario' section describes the task: "A senior network administrator requires you to map the Remote Branch Office network and discover information about all of the devices in the network. You must record all of the network device names, IP addresses and subnet masks, and physical interfaces interconnecting the network devices."

The network diagram on the right shows the topology: Admin-PC is connected to S1 (Switch), which is connected to Edge (Edge Router). Edge is connected to Remote Branch Office (Remote Branch Office Router). The connection between Edge and Remote Branch Office is highlighted in red.

Admin PC/cmd (command prompt)

We beginnen eerst met de Admin PC.

Vanaf de Admin PC kunnen we zien via de cmd welke IP adressen komen. Vervolgens kunnen we de IP tabel helemaal invullen.

Commando's in cmd Admin PC:

Rood is de commando wat je moet invoeren in de cmd!

C:\> **ssh -l admin01 192.168.1.1**

Password: **S3cre7P@55**

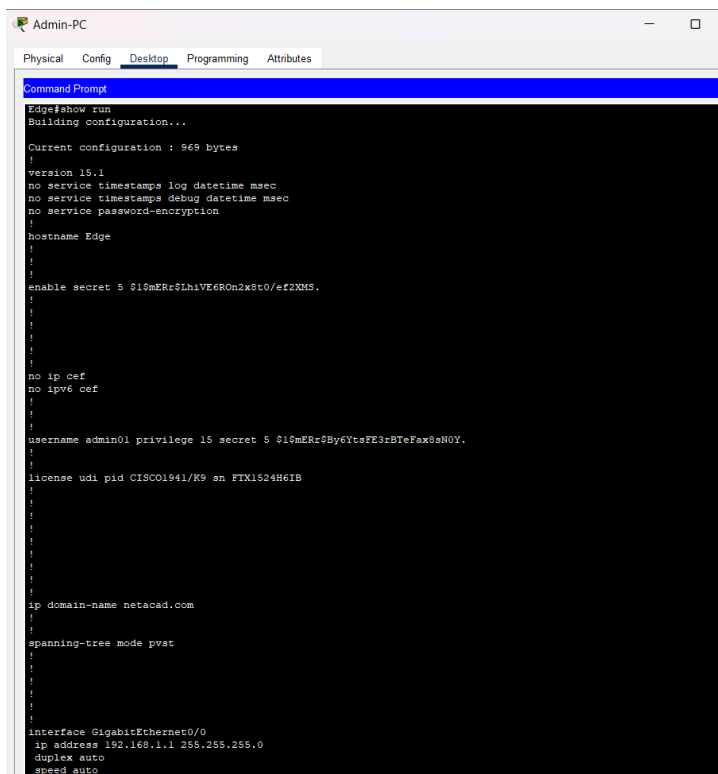

Edge#

Edge# **sh ip interface brief**

Edge# **show run** deze commando laat alle netwerken zien. Zoals IP adres en subnetmask etc.

Tip: Gebruik deze commando tijdens je examen dan kan je zien welke netwerken verbonden zijn etc.

Als je de show run commando doet zie je alle netwerken informatie.

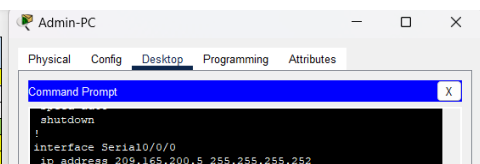

```
Admin-PC
Physical Config Desktop Programming Attributes
Command Prompt
Edge#show run
Building configuration...

Current configuration : 968 bytes
!
version 15.1
no service timestamps log datetime msec
no service timestamps debug datetime msec

!
interface GigabitEthernet0/0
ip address 192.168.1.1 255.255.255.0
duplex auto
speed auto
```

Hieronder hebben we de IP tabel en de cmd staan. Als je goed kijkt hebben we de 209.165.200.5 IP adres in de cmd. De subnet mask staat er ook bij: 255.255.255.252. Vul deze subnet mask in de IP tabel.

Device	Interface	IP Address	Subnet Mask	Gateway	Local Interface and Connected Neighbor
Admin-PC	Fa 0/0	192.168.10.10	255.255.255.0	192.168.10.1	S1
S1 (Vlan1)					
Edge	G 0/0	192.168.1.1	255.255.255.0		
	S 0/0/0	209.165.200.5	255.255.255.252		S 0/0/0 ISP

```
Admin-PC
Physical Config Desktop Programming Attributes
Command Prompt
shut down
!
interface Serial0/0/0
ip address 209.165.200.5 255.255.255.252
```

Edge# **show lldp neighbors**

% LLDP is not enabled. Dit betekent dat de lldp niet ingeschakeld is.

We gaan ervoor zorgen dat het wel ingeschakeld word

Edge#config t

```
Edge(config)#lldp run
```

Edge(config)#exit

Edge#show lldp neighbors

Nu zie je wel dat de lldp is ingeschakeld is.

```
Edge#show lldp neighbors
Capability codes:
  (R) Router, (B) Bridge, (T) Telephone, (C) DOCSIS Cable Device
  (W) WLAN Access Point, (P) Repeater, (S) Station, (O) Other
Device ID           Local Intf      Hold-time      Capability      Port ID
S1                  Gig0/0          120            B               Gig0/1

Total entries displayed: 1
Edge#
```

```
Edge#sh ip route connected
```

Hier laten ze zien dat IP adressen connected zijn.

```
Edge#sh ip route connected
C    192.168.1.0/24    is directly connected, GigabitEthernet0/0
C    209.165.200.4/30  is directly connected, Serial0/0/0
Edge#
```

Edge#ping 209.165.200.7

```
Edge#ping 209.165.200.7
Type escape sequence to abort.
Sending 5, 100-byte ICMP Echos to 209.165.200.7, timeout is 2 seconds:

Reply to request 0 from 209.165.200.6, 14 ms
Reply to request 1 from 209.165.200.6, 1 ms
Reply to request 2 from 209.165.200.6, 1 ms
Reply to request 3 from 209.165.200.6, 1 ms
Reply to request 4 from 209.165.200.6, 1 ms

Edge#
```

Let op! Met deze ping zie je geen **209.165.200.7** maar **209.165.200.6**.

Uiteindelijk moet er 209.165.200.10 staan onder IP Adress!

Vul dit onder de vak IP Adress in!

[illegible]

[illegible]

Doe nu exact hetzelfde hoe je het gedaan hebt met de Edge router

RBO-Edge# **show lldp neighbors**

% LLDP is not enabled

RBO-Edge# **conf t**

RBO-Edge(config)# **lldp run**

RBO-Edge(config)# **exit**

RBO-Edge# **show lldp neighbors**

```
RBO-Edge#show lldp neighbors
Capability codes:
  (R) Router, (B) Bridge, (T) Telephone, (C) DOCSIS Cable Device
  (W) WLAN Access Point, (P) Repeater, (S) Station, (O) Other
Device ID           Local Intf      Hold-time  Capability  Port ID
RBO-Firewall        Gig0/1         120        R           Gig0/0
```

Als je ziet zijn de volgende gele vakken ingevuld: RBO-Firewall en de Local interface and Connected Neighbor bij RBO-Edge

Let op! Op het examen moet je dit bij de RBO Edge zetten en **niet** bij de RBO-Firewall!

Device	Interface	IP Address	Subnet Mask	Gateway	Local interface and Connected Neighbor
Admin-PC	Fa 0/0	192.168.10.10	255.255.255.0	192.168.10.1	S1
S1 (Vlan1)					
Edge	G 0/0	192.168.1.1	255.255.255.0		
	S 0/0/0	209.165.200.5	255.255.255.252		S 0/0/0 ISP
RBO-Edge	Gi 0/0	209.165.200.10	255.255.255.252		
	Gi 0/1	192.168.3.249	255.255.255.252		Gi 0/0 RBO Firewall
RBO-Firewall					

Nu gaan we kijken wat de volgende device is met deze commando.

RBO-Edge# **sh ip route connected**

Met de 192.168.248/30 adres wordt het 192.168.3.250. Met deze adres gaan we pingen.

```
RBO-Edge#sh ip route connected
C 192.168.3.248/30 is directly connected, GigabitEthernet0/1
C 209.165.200.8/30 is directly connected, GigabitEthernet0/0
RBO-Edge#
```

Ping is goed gegaan. Gebruik nu deze adres **192.168.3.250** om verbinding te maken met de RBO-Firewall device.

```
RBO-Edge#ping 192.168.3.250

Type escape sequence to abort.
Sending 5, 100-byte ICMP Echos to 192.168.3.250, timeout is 2 seconds:
!!!!
Success rate is 80 percent (4/5), round-trip min/avg/max = 0/0/0 ms
```

RBO-Edge#**ssh -l RBOadmin 192.168.3.250**

Password: **S3cre7P@55**

Je zit nu in de RBO-Firewall device.

RBO-Firewall#

Vervolgens doe je deze commando om achter te halen welke Interface, IP en subnetmask.

RBO-Firewall#**show run**

Vul deze Interface, IP en subnetmask in de tabel IP.

```
interface GigabitEthernet0/0
ip address 192.168.3.250 255.255.255.0
duplex auto
speed auto
!
interface GigabitEthernet0/1
ip address 192.168.4.254 255.255.255.128
duplex auto
speed auto
```

Interface, IP en subnetmask zijn in gevuld in de IP tabel.

Device	Interface	IP Address	Subnet Mask	Gateway	Local interface and Connected Neighbor
Admin-PC	Fa 0/0	192.168.10.10	255.255.255.0	192.168.10.1	S1
S1 (Vlan1)					
Edge	G 0/0	192.168.1.1	255.255.255.0		
	S 0/0/0	209.165.200.5	255.255.255.252		S 0/0/0 ISP
RBO-Edge	Gi 0/0	209.165.200.10	255.255.255.252		
	Gi 0/1	192.168.3.249	255.255.255.252		Gi 0/0 RBO Firewall
RBO-Firewall	Gi 0/0	192.168.3.250	255.255.255.0		
	Gi 0/1	192.168.4.254	255.255.255.128		

RBO-Firewall#**sh lldp neighbors** met deze volgende commando kan je zien welke device en local, neighbor moeten invullen in de IP tabel.

```
RBO-Firewall#sh lldp neighbors
Capability codes:
  (R) Router, (B) Bridge, (T) Telephone, (C) DOCSIS Cable Device
  (W) WLAN Access Point, (P) Repeater, (S) Station, (O) Other
Device ID      Local Intf    Hold-time    Capability    Port ID
RBO-Edge       Gig0/0        120          R             Gig0/1
sw-rbol        Gig0/1        120          B             Gig0/1

Total entries displayed: 2
RBO-Firewall#
```

[illegible]

```
RBO-Firewall#ping 192.168.4.255
```

```
RBO-Firewall#ping 192.168.4.255

Type escape sequence to abort.
Sending 5, 100-byte ICMP Echos to 192.168.4.255, timeout is 2 seconds:
.
Reply to request 1 from 192.168.4.131, 0 ms
Reply to request 1 from 192.168.4.132, 0 ms
Reply to request 1 from 192.168.4.133, 0 ms
Reply to request 2 from 192.168.4.131, 0 ms
Reply to request 2 from 192.168.4.132, 0 ms
Reply to request 2 from 192.168.4.133, 0 ms
Reply to request 3 from 192.168.4.131, 0 ms
Reply to request 3 from 192.168.4.132, 0 ms
Reply to request 3 from 192.168.4.133, 0 ms
Reply to request 4 from 192.168.4.131, 0 ms
Reply to request 4 from 192.168.4.132, 0 ms
Reply to request 4 from 192.168.4.133, 0 ms
```

```
RBO-Firewall#ssh -l RBOadmin 192.168.4.131
```

```
sw-rbo1>en
```

```
sw-rbo1#show run
```

```
sw-rbo1#sh ip int brief
```

```
FastEthernet0/24      unassigned      YES manual up
GigabitEthernet0/1    unassigned      YES manual up
GigabitEthernet0/2    unassigned      YES manual up
Vlan1                 192.168.4.131  YES manual up
sw-rb01#
```

Fast, Gig ethernet en Vlan1 staan in de IP tabel in.

Device	Interface	IP Address	Subnet Mask	Gateway	Local interface and Connected Neighbor
Admin-PC	Fa 0/0	192.168.10.10	255.255.255.0	192.168.10.1	S1
S1 (Vlan1)					
Edge	G 0/0	192.168.1.1	255.255.255.0		
	S 0/0/0	209.165.200.5	255.255.255.252		S 0/0/0 ISP
RBO-Edge	Gi 0/0	209.165.200.10	255.255.255.252		
	Gi 0/1	192.168.3.249	255.255.255.252		Gi 0/0 RBO Firewall
RBO-Firewall	Gi 0/0	192.168.3.250	255.255.255.0		Gi 0/1 RBO-Edge
	Gi 0/1	192.168.4.254	255.255.255.128		Gi 0/1 sw-rbo1
Sw-rbo1	Vlan1	192.168.4.131			
	Gi 0/2				
	Gi 0/1				
	Fa 0/24				

sw-rbo1#sh lldp neighbors

Vul deze devices en de local en neighbor in de IP tabel.

```
sw-rbo1#sh lldp neighbors
Capability codes:
  (R) Router, (B) Bridge, (T) Telephone, (C) DOCSIS Cable Device
  (W) WLAN Access Point, (P) Repeater, (S) Station, (O) Other
Device ID      Local Intf    Hold-time    Capability    Port ID
sw-rbo2        Gig0/2        120          B             Gig0/2
RBO-Firewall   Gig0/1        120          R             Gig0/1
```

De devices en de local en neighbor staan in de IP tabel.

Device	Interface	IP Address	Subnet Mask	Gateway	Local interface and Connected Neighbor
Admin-PC	Fa 0/0	192.168.10.10	255.255.255.0	192.168.10.1	S1
S1 (Vlan1)					
Edge	G 0/0	192.168.1.1	255.255.255.0		
	S 0/0/0	209.165.200.5	255.255.255.252		S 0/0/0 ISP
RBO-Edge	Gi 0/0	209.165.200.10	255.255.255.252		
	Gi 0/1	192.168.3.249	255.255.255.252		Gi 0/0 RBO Firewall
RBO-Firewall	Gi 0/0	192.168.3.250	255.255.255.0		Gi 0/1 RBO-Edge
	Gi 0/1	192.168.4.254	255.255.255.128		Gi 0/1 sw-rbo1
Sw-rbo1	Vlan1	192.168.4.131	255.255.255.128		
	Gi 0/1				Gi 0/1 RBO-Firewall
	Gi 0/2				Gi 0/2 sw-rbo2
	Fa 0/24				
Sw-rbo2					

Als je zeker wilt weten over de subnetmask van de sw-rbo1 doe de commando **show run**

Dan krijg je het subnetmask te zien.

```
interface Vlan1
ip address 192.168.4.131 255.255.255.128
```

We zijn nu klaar met de sw-rbol device.

We gaan nu verder met de sw-rbo2 device

sw-rbo1#exit

RBO-Firewall#ssh -l RBOadmin 192.168.4.132

Password: S3cre7P@55

sw-rbo2>en

Password: S3cre7P@55

sw-rbo2#sh ip int brief

Vul deze interfaces en IP adres in de IP tabel.

```
GigabitEthernet0/1    unassigned    YES manual up
GigabitEthernet0/2    unassigned    YES manual up
Vlan1                 192.168.4.132 YES manual up
```

Interfaces en IP adres staan in de IP tabel.

Device	Interface	IP Address	Subnet Mask	Gateway	Local interface and Connected Neighbor
Admin-PC	Fa 0/0	192.168.10.10	255.255.255.0	192.168.10.1	S1
S1 (Vlan1)					
Edge	G 0/0	192.168.1.1	255.255.255.0		
	S 0/0/0	209.165.200.5	255.255.255.252		S 0/0/0 ISP
RBO-Edge	Gi 0/0	209.165.200.10	255.255.255.252		
	Gi 0/1	192.168.3.249	255.255.255.252		Gi 0/0 RBO Firewall
RBO-Firewall	Gi 0/0	192.168.3.250	255.255.255.0		Gi 0/1 RBO-Edge
	Gi 0/1	192.168.4.254	255.255.255.128		Gi 0/1 sw-rbol
Sw-rbol	Vl 1	192.168.4.131	255.255.255.128		
	Gi 0/1				Gi 0/1 RBO-Firewall
	Gi 0/2				Gi 0/2 sw-rbo2
	Fa 0/24				
Sw-rbo2	Gi 0/1				
	Gi 0/2				
	Vlan1	192.168.4.132			

Doe nu het volgende.

sw-rbo2#sh lldp neighbors

Vul de local interface in de IP tabel.

```
sw-rbo2#sh lldp neighbors
Capability codes:
  (R) Router, (B) Bridge, (T) Telephone, (C) DOCSIS Cable Device
  (W) WLAN Access Point, (P) Repeater, (S) Station, (O) Other
Device ID      Local Intf    Hold-time    Capability    Port ID
sw-rbol        Gig0/2        120          B             Gig0/2
Total entries displayed: 1
```

De local interface staat in de IP tabel

Device	Interface	IP Address	Subnet Mask	Gateway	Local interface and Connected Neighbor
Admin-PC	Fa 0/0	192.168.10.10	255.255.255.0	192.168.10.1	S1
S1 (Vlan1)
